PERSONALISED LEARNING WEBSITE

Specific website features summarised from the supplied project resources

1. AI-Powered Learning Diagnosis

Identifies the concepts, prerequisite knowledge and reasoning steps a student is struggling with—not only whether an answer is right or wrong.

2. Adaptive Learning Method Router

Chooses and adjusts the learning approach for each topic based on the student's performance and learning needs.

3. Multimodal Question Submission

Allows students to ask questions using text and, where supported, specialised editors, handwriting, screenshots or photos, document uploads, voice, and live screen sharing.

4. Personalised AI Tutor

Provides step-by-step explanations, worked examples, hints, guiding questions and feedback suited to the student's level and course.

5. Course Material Integration

Lets students upload lecture notes, slides or a syllabus to build topic outlines and generate practice questions based on their materials.

6. Personalised Learning Resources

Recommends relevant videos, readings and examples according to the student's current level and identified learning gaps.

7. Adaptive Quizzes and Practice

Provides or generates questions suited to the student's ability, identifies repeated mistakes, explains incorrect answers and suggests targeted exercises.

8. Personalised Study Planner

Creates a study schedule using learning gaps, upcoming exams, topic importance and the student's available study time.

9. Student Progress Dashboard

Displays topic mastery, quiz performance, recurring errors, revision needs and progress, including recommended next steps.

10. Spaced Revision and Knowledge Retention

Schedules revision based on earlier performance and uses follow-up questions to check whether students have retained what they learned.

11. Live Study Lens

With the student's permission, lets the AI tutor view shared screen content and help explain slides, diagrams, equations, code or problems.

12. Privacy, Accessibility and Flexible Access

Supports secure accounts, student-controlled screen sharing and data controls, with mobile-friendly design, accessibility and low-bandwidth use as goals.

Suggested Website Learning Flow

1. Assess the student's current understanding.
2. Diagnose learning gaps and personalise the approach.
3. Teach the topic and provide targeted practice.
4. Test understanding with questions or quizzes.
5. Update the student's learning profile and adapt the next steps.

Suggested first prototype: prioritise learning diagnosis, the adaptive learning cycle, question submission, targeted practice and progress tracking. Features such as voice tutoring, offline synchronisation and peer study rooms can be considered for later stages.

Note: These are proposed features described or summarised from the supplied resources; the document does not claim that every feature has already been implemented.
